

Aquaculture Consultancy and Engineering

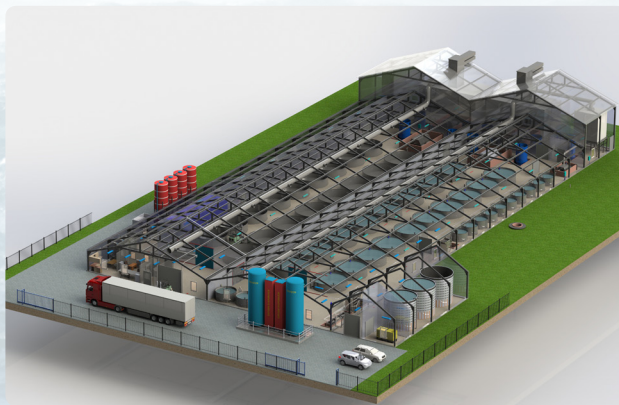

Company

Aquaculture Consultancy & Engineering (ACE) is established in the Netherlands. ACE is specialist in consultancy, design and construction of Recirculating Aquaculture Systems (RAS) with over 30 years of experience. The company operates from two offices and two workshops. ACE has a team of highly qualified engineers and technicians who work hand in hand to optimize the final products.

Drawings & Design

Designing of fish farms and equipment is done by a team of engineers that work with state of the art software.

Research & Development

ACE is one of the leading companies in the development of important technologies to promote sustainable and innovative RAS farming. Lot of effort and resources are put in research and development. As a result of this approach the RAS technology offered by ACE is continuously improving. As ACE produces all products needed for RAS they can develop, test and fine-tune products in their test facility.

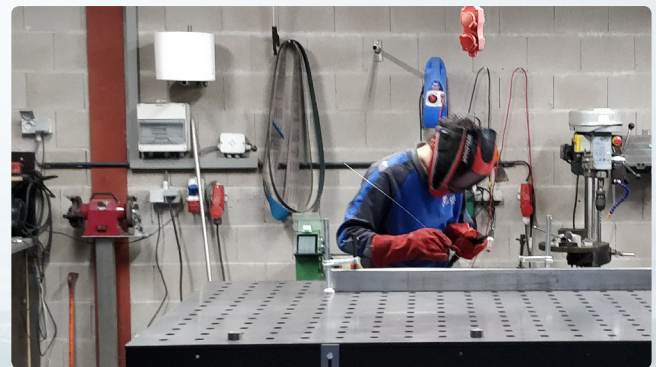

Consultancy

With experience in both fresh and salt water systems ACE is highly capable of providing customers with advice on design, construction and process related challenges. These include feasibility studies for starting projects and fine tuning of existing systems.

Workshops

ACE has two separate workshops. One workshop is fully equipped for design and production of plastic and the other for stainless steel products.

Installation on site

ACE specialists carry out the installation. The ground team is backed by staff in the Dutch office for procurements, documentation, technical drawings, calculations and various other activities.
